

OGBONNA PRAYSKEY NNAEMEKA

Full-Stack JavaScript/TypeScript Developer

+234 813 894 9700 | prayskeyo@gmail.com | linkedin.com/in/prayskey | github.com/prayskey | Owerri, Imo State, Nigeria

SUMMARY

I'm a full-stack JavaScript/TypeScript developer who builds end-to-end web applications using React, Node.js, Express.js, PostgreSQL, and Supabase. I built backend systems for CampusFlow, a real-time university clearance platform, and I'm currently building NexEdge, a full-stack trading journal integrating live broker data and AI-powered analytics—handling database architecture, API design, authentication, and frontend implementation end-to-end. I like owning problems fully rather than working on isolated pieces, and I'm looking to bring that depth to a professional engineering team.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, HTML, CSS
- **Frontend:** React, Vite, Tailwind CSS
- **Backend:** Node.js, Express.js, REST APIs, WebSockets
- **Database:** PostgreSQL, Supabase
- **Tools & Deployment:** Git, GitHub, Vercel, Railway
- **Other:** Zod, JWT Authentication, API Integration

EXPERIENCE

Software Engineer & Product Developer

July 2026 – Present

NexEdge – Automated Trading Journal • *Independent Project*

- Building a full-stack automated trading journal designed to automatically capture, organise, and analyse users' trading activity.
- Developing the application across React, TypeScript, Node.js, Express.js, PostgreSQL, and Supabase.
- Integrating broker data through MetaApi, supporting retrieval of historical trades and real-time transmission of new trading activity.
- Designing analytics and AI-powered coaching features to identify trading patterns and generate personalised insights from users' trading history.
- Working across database architecture, API design, authentication, frontend architecture, and product development.

Software Engineer, Backend

June 2026–July 2026

CampusFlow — Hack4FUTO • *Owerri, Nigeria*

- Developed backend functionality for a university clearance and certificate retrieval platform designed to reduce queues and simplify the clearance process for new students.
- Built backend services using Node.js and Express.js, with Supabase for database operations and queries.
- Implemented functionality enabling students to complete clearance-related processes remotely from their phones or other devices.
- Collaborated with a teammate responsible for the blockchain layer, which served as the source of truth for certificate records.
- Deployed the application on Vercel using a stateless serverless architecture.

EDUCATION

Federal University of Technology, Owerri (FUTO)

November 2024 – 2029

B.Eng. Software Engineering • *Imo State, Nigeria*
